How much bandwidth a seat costs

The requirements give planning numbers. Agent Desktop Plus and the Plus adapters are 128 kbps. The Java agent is 88 kbps. Agent Assist adds about 12 kbps. A VPN adds about 64. CRM or other business apps add about 64. A UC client such as Teams, Zoom, Office@Hand, RingCentral, or Nextiva is called out around 320 kbps.
One-way latency should stay under 150 ms. Wi-Fi is acceptable when the bandwidth is actually there. Wired is preferred. Satellite is not supported. Cellular and 5G are not supported.
Those are support statements, not opinions.
Add the published per-seat numbers
Reject satellite and cellular
