Prebuilt UC and the connector that is not an adapter

The product material names prebuilt connections for Zoom Phone and Microsoft Teams. A prebuilt path is a product. A Web Connector that opens a URL is also a product. They are not the bandwidth line you add for a Teams client on the agent’s PC.
The technical requirements treat a Teams, Zoom, Office@Hand, RingCentral, or Nextiva client on the workstation as about 320 kbps of extra traffic. Integrating the UC platform and running its app are two designs.
Name prebuilt UC separately from the desktop app
Budget about 320 kbps when the UC client runs locally
