IVA and GenAI

A bot is a task in the right region, with a way back to a named skill, and a prompt that was tested.

1. **Studio has regions** The technical requirements publish Studio portal hosts by region: five9.us, five9.au, five9.ca, five9.uk, and five9.br studioportal.io, plus older inferencecommunications.com names. A task built in the wrong region will not be the task your VCC domain can call.
2. **A task key is not a vibe** IVA Transfer is a module. It needs a task to transfer to. The digital integration article, dated in the community as 26 March 2026, says you copy a ChatBot task key into the VCC IVA transfer side after the Studio task exists.
3. **Contain, or hand back with context** A useful bot either finishes the job or returns the caller to a skill with the reason intact. IVA Transfer that dead-ends, or a Skill Transfer with no skill, is how you manufacture the Default queue.
4. **GenAI Studio is a hub, not a slogan** The GenAI Studio page describes a low-code hub: choose among models, attach knowledge and customer data, test on real call data, keep a prompt library, and control output. It says the hub powers Five9 AI applications and initially focuses on Agent Assist summaries.
5. **NLP in the IVR is not the same as Studio** The modules chapter includes a Natural Language Processing module and Voice Input, and it also includes IVA Transfer. They are different blocks. NLP inside a script is not automatically a Studio task, and a Studio task is not automatically the NLP module.
6. **Prompts are a production change** A prompt library in GenAI Studio is production configuration. Changing a summary prompt changes what agents and customers are told. The page says you can test with call data and control output. A change without a test is how a policy you do not have gets spoken.
7. **A bot review you can finish** Region, key permission, task type, failure branch, named skill, variable the agent sees, prompt test, and the recording clock. Eight checks. Each one has a page. A bot project that cannot pass them is a slide.

Confirm before relying.

A note from the student behind this lab

This is an **independent, free, learning-only student project**. It respects every company and vendor, and every trademark belongs to its owner. It is **not affiliated with or endorsed by** any of them.

If anyone has a concern, the content will be removed or corrected promptly via the contact form at https://cyphermonkeylabs.com/#contact. Nothing here is sold. Happy to volunteer for any organization.

Confirm before relying on a number, a port, or a vendor case-study claim. Product behavior belongs to the cited page.
