Two administrator applications

The technical requirements still describe a Java VCC Administrator and a web Administrator Console. Java is not supported on Mac workstations with ARM processors. On those machines the document says to use VCC Administrator via Web in Admin Console.
Because web applications do not need a Java SE subscription, the same document strongly recommends moving to the Five9 Plus applications. The Java client is still documented, with named JRE 8 update builds. Treat that list as dated and re-read the PDF before you image a PC.
Choose Java or web admin
Remember the ARM exception
