Performance views are dashboards, wallboards, and KPIs Learn it in 5 minutes

The WEM page lists performance management separately from quality and from analytics: role-based customizable dashboards, customizable KPIs and metrics, real-time performance visibility, data from external sources, wallboards, and gamification.
A wallboard is not a standard report, and gamification is not a disposition. The page names them. It does not define a formula for a KPI. The analytics PDF downloaded in this check did not yield readable sentences, so no retention month and no chart-count is taken from it.
