Analytics and surveys sit beside the call

The data sheet and the product page put interaction analytics and customer surveys next to QM and WFM. Analytics is how you see topics across many calls. A survey is how the customer scores the one call. They are not the abandon rate and they are not a disposition, unless you deliberately map them.

This lab does not claim a specific analytics vendor screen. Native WEM and a partner suite will not look identical. The question to ask is which topics you will act on.

Keep survey, abandon, and topics apart

Give every topic an owner
