The domain is the tenant

You sign into one domain. Skill groups, users, lists, prompts, scripts, and campaigns live there. Another domain does not inherit them.

Five9 does not use CUCM-style partitions and calling search spaces. If you are coming from Unified Communications Manager, do not look for a partition table. Look for the domain, then skills and campaigns. That mapping is a teaching bridge, not a vendor migration wizard.

State the domain boundary

Say which roles join a skill group

Sources and go deeper
