Interview prompts

Generic study answers. Not a person's work history.

- **What do you build before an outbound campaign?** Skill groups, user profiles, users, contact fields, lists, dispositions, and campaign profiles. Then the campaign.
- **Which builds add IVR scripts on the planning roadmap?** Inbound and autodial.
- **What is a Five9 domain?** The tenant boundary. Lists and skills do not leak into the next domain.
- **Does Five9 use CUCM partitions?** Not in the admin model this lab cites. The boundary is the domain. Mapping partitions to anything is a teaching bridge.
- **Who can be in a skill group?** Users with the agent or supervisor role. A user can be in more than one skill, and a campaign can have more than one skill.
- **How many campaign profiles can a campaign use at once?** One. A profile can still be reused by several campaigns. Assign it in Advanced mode.
- **What can a campaign profile override?** Defaults such as the ANI. Workflow rules can swap the profile.
- **What happens if an inbound campaign is stopped?** It does not answer. Callers can hear busy.
- **Name the three campaign types.** Inbound, outbound, and autodial. Blended is how you staff, not a fourth type.
- **What is list penetration?** The default walk: the first number on every record, then the next.
- **What is vertical list dialing?** The dialer finishes the numbers on one record before it moves on.
- **What does a final disposition do to the other numbers on a record?** It stops them for that campaign.
- **Name the dialing modes on the product pages.** Preview, progressive, power, predictive, and manual touch.
- **How does the outbound page describe progressive?** One customer call per available agent.
- **Why will you not state a numeric abandon default?** The defaults page warns if Max Abandoned Call Percentage changes. It does not give this lab a percent worth repeating.
- **What abandon windows does the defaults page describe?** A US rolling 30 days and a UK window of 24 hours, set with a Five9 representative.
- **What does TCPA manual touch block?** Paste and drag. The agent types the external number. Dial enables when it matches. Preview timeout sets Not Ready and does not auto-dial.
- **Which permission allows skipping records in TCPA manual touch?** User Can Skip Contact Records in TCPA Manual Touch.

- **Name four IVR modules.** Play, Menu, If/Else, and Skill Transfer are in the modules chapter, among others.
- **Where does a Skill Transfer with no skill go?** The community article says the Default queue.
- **Are call variables historical?** No. Enable reporting before the calls you need. Apply to All Dispositions skips custom dispositions.
- **Who can run standard reports?** A user with the Reporting role and at least one reporting permission.
- **Why is a matrix a bad CSV?** The reporting article treats matrix as a layout, not a direct CSV export.
- **How long is the call log, per the July 2026 article?** About 60 days unless retention is extended. Audio follows a different clock.
- **How long does the retention page keep VCC audio?** The sooner of 30 days, a successful SFTP or FTP offload, or the contract.
- **How long are DIDs kept after a domain closes?** 90 days. A disabled domain itself is 120 days after closure.
- **Name two API families without guessing SOAP versus REST.** Reporting Web Services and Statistics Web Services. The overview also says REST. The transport per family stays unconfirmed here.
- **What is the default codec?** G.711, described as uncompressed. DNS SRV is preferred for SIP targets.
- **Which TLS versions matter?** TLS 1.2 is required. TLS 1.1 is not supported. TLS 1.3 inbound ciphers are listed.
- **Is satellite a supported agent path?** No. Cellular and 5G are not supported either. One-way latency should stay under 150 ms.
- **What does the E911 data sheet say you dial?** 911 directly, with no prefix, and a dispatchable location. The partner named is RedSky.
- **What does MyE911 history show an org admin?** Time, user, number, location, recording, and the SIP invite.
- **Is a campaign-profile ANI the same as Certified Caller?** No. Certified Caller is the STIR/SHAKEN program associated with FCC and CRTC.
- **What is on the WEM product page?** Workforce management, quality, analytics, surveys, recording, and a Verint partnership.
- **Does this lab name GenAI Studio's default model?** No. The page describes an engine-agnostic studio and names Agent Assist summaries as an early consumer.
- **What credential will you not invent?** An administrator exam code. IVA Sales Certified is a partner sales badge: 5 modules, 20 questions, 80 percent.

A note from the student behind this lab

This is an **independent, free, learning-only student project**. It respects every company and vendor, and every trademark belongs to its owner. It is **not affiliated with or endorsed by** any of them.

If anyone has a concern, the content will be removed or corrected promptly via the contact form at https://cyphermonkeylabs.com/#contact. Nothing here is sold. Happy to volunteer for any organization.

Confirm before relying on a number, a port, or a vendor case-study claim. Product behavior belongs to the cited page.
